<b>Gini coefficient (per cent)</b>	33	33	34	35	35	35	34	34	34	35

**Notes:**

- Figures are for the United Kingdom from 2002/03 onwards. Earlier years are for Great Britain only.
- These estimates should be treated with caution as they are unlikely to be accurate to the degree of precision quoted.
- Results for the bottom 10 per cent of reported incomes (italicised in the above table) are particularly vulnerable to income measurement problems. They have no validity as a guide to the consumption capabilities of the poorest 10 per cent of individuals. They are also affected by the presence of negative incomes on the AHC measure.
- Results for the top 10 per cent of reported incomes (italicised in the above table) are particularly vulnerable to sampling errors and income measurement problems. HMRC statistics are likely to provide a better guide to incomes at the top end of the income distribution.

**Notes:**

1. The 1994/95 information is for Great Britain and 2005/06 is for the United Kingdom. However, means and medians for GB and UK were found to be very similar (see Appendix 4 of HBAI 2004/05), so allowing comparisons of the type shown in this table.
2. From one year to the next, certain results may be volatile. Therefore, year-on-year comparisons should be treated with caution.
3. Abbreviations for **full-time** and **part-time** have been used in these supplementary tables. The abbreviations used are FT and PT, respectively. For full definitions of these terms, see Appendix 1.
4. Results for the bottom quintile median is particularly vulnerable to income measurement problems.

**Notes:**

1. The 1994/95 information is for Great Britain and 2004/05 is for the United Kingdom. However, means and medians for GB and UK were found to be very similar (see Appendix 4 of HBAI 0405), so allowing comparisons of the type shown in this table.
2. From one year to the next, certain results may be volatile. Therefore, year-on-year comparisons should be treated with caution.
3. Abbreviations for **full-time** and **part-time** have been used in these supplementary tables. The abbreviations used are FT and PT, respectively. For full definitions of these terms, see Appendix 1.
4. Results for the bottom quintile median is particularly vulnerable to income measurement problems. They are also affected by the presence of negative incomes on the AHC measure.

Single with two children aged 5 and 14	168	176	181	188	194	214	219	220	226	229

**Notes:**

1. Figures are for the United Kingdom from 2002/03 onwards. Earlier years are for Great Britain only.
2. This table takes levels of equivalised income for the population as a whole and translates them into cash equivalents for different family types. For example, for results Before Housing Costs, it shows that 60 per cent of median (equivalised) income in 2005/06 was £217 per week. This translates to a cash income of £145 for a single person with no children. This implies that a single person with no children with a cash income of £145 or less is below 60 per cent of median (equivalised) income for the population as a whole.
